ABOUT US

Middle Corridor Logistics is an international logistics service provider founded by experts with more than 20 years of experience in the logistics industry.

With our competent staff in our head offices in Ankara and Istanbul, we offer services with our experienced partners and agency network, such as import/export trains from China, fast intermodal transportation in Central Asia, and economic and continuous intermodal logistics services in Europe.

We also ensure efficiency in every destination with our road and air transportation alternatives. We support you in all your logistics processes, including customs clearance, intermediate transportation, handling, and storage services, and provide comprehensive logistics solutions.

With our professional team that can act according to the needs of the constantly changing logistics industry, we design and operate the most appropriate processes. With our customer-focused, fast, flexible, and dynamic structure, we aim to be a "solution partner" beyond the traditional definition of transportation.

To support the development of our industry and business partners, we continue to offer sustainable and environmentally friendly logistics solutions.

BLOCK

Block trains are a special type of train that provides high efficiency and economic suitability by carrying the same goods in all wagons and transporting them to the same departure and destination points without division or storage. Different from wagon-load trains carrying different loads for different customers, block trains can compete with rail, road, and sea transportation systems. Block trains provide time and cost savings by avoiding the complexity and delays required to assemble and disassemble trains.

TRAIN

Middle Corridor Logistics provides end to end logistics solutions to its customers with block train transportation. It offers flexible planning and customized customer solutions with the best possible reservation options by providing transportation from the same shipper to the same recipient. Therefore, block trains are efficient and economical for the transportation of high-volume goods. It offers special solutions for all your needs related to wagon groups and block trains.

INTERMODAL

Intermodal freight transportation is a method that enables the seamless transportation of goods in a container or vehicle using multiple modes of transportation. In this method, cargo is transferred between modes without handling, increasing cargo security while reducing damage and loss. In addition, it enables faster transportation of goods and provides lower costs compared to road transportation. For intercontinental transportation, this method offers the most important advantages.

At Middle Corridor Logistics, we provide our customers with cost and time advantages in intermodal freight transportation with our extensive experience in the field. By bringing different transportation modes together, we offer customized solutions to meet our customers' needs. As a result, we can ensure seamless transportation and fast delivery while reducing costs. Using our expertise in intermodal freight transportation, we continue to maintain our leading position in the transportation industry, putting our knowledge to work for the benefit of our customers.

Multimodal transportation is a transportation method where different transportation vehicles are seamlessly integrated. This method optimizes delivery dates and controls product costs by reducing stock costs by allowing cargo to move quickly and efficiently.

This transportation method enables the ultimate destination of goods to be reached by using the most suitable combination of transportation vehicles such as trucks, trains, ships, airplanes, or other transportation vehicles. Multimodal transportation is also highly advantageous in terms of environmental sustainability and minimizes its environmental footprint.

Middle Corridor Logistics provides you with a fast and cost-effective solution using multimodal transportation. This method efficiently transports your goods and guarantees timely deliveries, contributing to the success of your business.

INTERMODAL AND MU

LTIMODAL ROUTES

RAIL FREIGHT

Middle Corridor Logistics provides its customers with an environmentally friendly and competitive transportation mode, which is railway transportation. In this service, we offer our customers cost and transit time advantages while providing a safe transportation service for both cargo and human safety.

Railway transportation is a transportation method also known as "Green Transportation" that is important for sustainability by reducing carbon emissions. Therefore, the widespread use of railway transportation provides environmental benefits both in our country and worldwide.

Middle Corridor Logistics takes pride in providing its customers with an environmentally friendly and sustainable transportation mode through railway transportation. With the advantages it offers both to the environment and its customers, it plays a leading role in the transportation sector.

INTERNATIONAL ROAD FREIGHT

Middle Corridor Logistics takes pride in providing the most effective solutions for your domestic and international road transportation needs, optimizing your logistics processes to ensure maximum efficiency. With our experienced team and reliable partners, we manage all aspects of the transportation process from the point of origin to the final destination seamlessly. Our flexible and creative solutions enable time and cost savings, while our optimized logistics processes ensure the highest level of customer satisfaction.

Among the road transportation services, options such as full truckload shipments, groupage services, temperature-controlled transportation, heavy and oversized cargo transportation, express transportation are available. As an experienced organization, we provide our customers with the most suitable solutions for their needs.

At Middle Corridor Logistics, our aim is to meet the logistics needs of our customers in the best way possible and make their business easier. You can also trust us for your road transportation needs and entrust your business to safe hands.

SEAWAY TRANSPORTATION

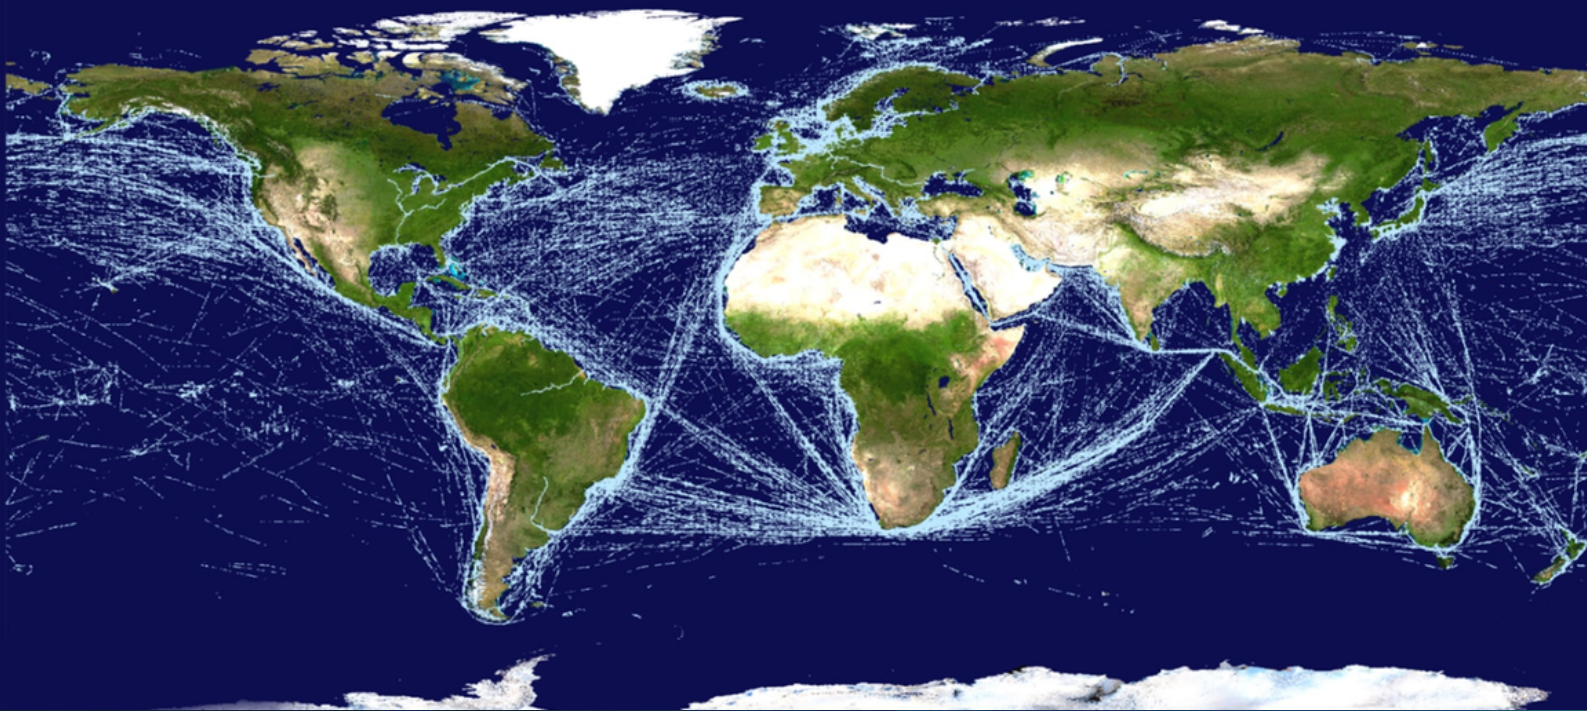

Sea transportation is a shipping method used to transfer products between ports and send them to the desired location at the desired time. As Middle Corridor, with its specialized team in the international transportation sector, it provides customers with the most suitable options for sea transportation operations by accessing thousands of ports worldwide.

Middle Corridor Logistics offers FCL (Full Container Load), LCL (Less than a Container Load) and special equipment options (Open Top, Flat Rack, Reefer Container) for the transportation of products to its customers.

As the pioneer in sea transportation, Middle Corridor Logistics works with dedication and precision to ensure customer satisfaction.

SEAWAY ROUTES

Middle Corridor Logistics services develop logistics strategies that are suitable for the different transportation needs of various sectors and provide services with the most suitable and accurate equipment according to the type of loaded products. Middle Corridor Logistics adopts a flexible and dynamic service approach and adapts to possible changes in the supply chain.

Our service, which takes into account every aspect of your shipments, covers all processes from A to Z. Our wide range of services is spread across six continents and aims to provide you, our valuable customers, with the best service at the most reasonable prices.
